MEMORY ADVOCATE PEERS (MAP)
The MAP Program at CaringKind, the Heart of Alzheimer's Caregiving
CaringKind Early-Stage Services

Have you been recently diagnosed with Mild Cognitive Impairment or dementia?
Are you confused and afraid? Not sure where to go or who to turn to?

MAP can help.

A diagnosis of Alzheimer's Disease or a related dementia can be devastating. You may wonder where to turn or what to do next. The MAP Program at CaringKind pairs you and your care partner to a mentor – a trained volunteer, who has prior experience caring for someone living with dementia.

MAP gives you and your care partner the opportunity to share experiences with someone who “has been through it,” learn strategies for living well with dementia, connect to community resources, and access clinical trials and other research opportunities.

With MAP, you can feel empowered to continue to live a life with purpose, dignity, and quality.

Benefits:
- Be heard and supported by a mentor with lived experience.
- Learn about education opportunities and trusted resources.
- Access support and build a network for future needs.
- Discover new strategies and opportunities to live purposefully and with meaning.
- Gain assistance with clinical trials and research participation.
